Professional Summary

Computer Engineering student at UTFPR and Data Analyst at Drogamais, with hands-on experience building complete data pipelines — from collection to dashboard — using Python, Polars and DuckDB, with storage in a Data Lake (MinIO). Complementary experience in web development (React, Node.js) and infrastructure (Docker, CI/CD), with automation and AI integrations via MCP.

Career Objective

To work as a Data Engineer, deepening my knowledge in data architectures, pipeline orchestration and applied AI automation — using Python, Polars, DuckDB and modern infrastructure tooling.

Education

- **Computer Engineering – UTFPR — Universidade Tecnológica Federal do Paraná** *Aug 2022 – present*
Computer Engineering degree with a practical focus on systems, data and software architecture.
 - Fundamentals of systems, networks and computer architecture
 - Hands-on projects alongside coursework that led to working with data
 - Represented Brazil at the CanSat Competition 2024 (LtSat UTFPR)
- **Accounting Technician – ETEC — Escola Técnica Estadual** *Jan 2015 – Dec 2017*
Technical high-school-level degree in Accounting.

Professional Experience

- **Data Analyst – Drogamais** *Aug 2025 – present*
Complete data pipeline in production — from automated collection to dashboard — inside one of the largest pharmacy chains in Paraná.
 - Collection via APIs, web scraping, React forms and Power Automate
 - Processing with Polars, Data Lake on MinIO (Parquet + Hive)
 - OLAP analysis with DuckDB, delivered via Power BI and React dashboards
 - Orchestration with Prefect and Power Automate automations
- **Back-End Developer – Empresa Júnior Unect** *Jan 2025 – Aug 2025*
Development of Web, Desktop and Mobile solutions for real clients through UTFPR's technology junior enterprise.
 - Node.js, Express.js, JWT and React.js/Next.js in application development
 - MongoDB and PostgreSQL databases
- **Developer – Projeto LtSat — UTFPR** *Jan 2024 – Jan 2025*
Data reception and visualization system for a satellite (STM32), with a Node.js back-end and interactive D3.js visualizations. Represented Brazil at the CanSat Competition (USA) as the country's only team.

- Node.js back-end integrated with STM32 hardware
- Interactive telemetry data visualization in D3.js
- Represented Brazil at the CanSat Competition 2024 (USA)

Skills

- **Data Engineering:** Python, Polars, DuckDB (OLAP), Parquet + Hive, MinIO (Data Lake), Prefect, Web Scraping, Power Automate, MCP
- **Development:** React, Node.js, TypeScript, APIs REST, Power BI, SQL
- **Infrastructure:** Docker, CI/CD, Linux, Nginx, Cloudflare, Event-Driven

Languages

- **English:** Intermediate (B1) — reading, writing, listening and speaking. Studied at CALEM (Center for Modern Foreign Languages) at UTFPR.

Projects

- **Price Monitor — Basic Food Basket**
Pipeline that collects prices for ~120 basic food basket products via the public Menor Preço API across every city in Brazil, storing them in Azure Blob Storage for regional price variation analysis.
github.com/GianSE/mp_cesta_basica
- **Tutoria Tech — Meninas Digitais UTFPR**
Mentorship management platform for UTFPR's Meninas Digitais outreach program, with student progress tracking, role-based access control, and Rose — an AI assistant with RAG over documents and URLs.
github.com/GianSE/Tutoria_tech
- **Semantic Communication with Federated Learning**
Undergraduate research at UTFPR: convolutional autoencoders trained with Federated Learning compress semantic information in images at up to $192\times$ — a 99.48% bandwidth saving — while keeping competitive accuracy. Resulted in a paper submitted to IEEE.
